

Trademark filings as leading indicators for the EU economy

CIPO-CIGI
**5th Annual IP Data &
Research Conference**

Carolina Arias Burgos
EUIPO
24th March 2022

Cyclical analysis of EUTM filings

Annual rates of EUTM filings: turning points

Economic indicators: GDP, Domestic Demand, Confidence Indices, etc.

Cycles of economic indicators are compared with those of EUTM filings. Are they leading, coincident, lagging or acyclic? Which economic indicators are closer to EUTM filings trend?

Univariate models: monthly vs quarterly data

Univariate ARIMA models for EUTM filings are compared based on monthly and quarterly data: which models have better properties?

Multivariate VAR models (Granger causality)

Multivariate VAR models include EUTM filings and some economic indicators to improve forecasts.

EUTM filings, GDP and Domestic Demand

More economic indicators

- GDP excluding public services and agriculture
- Employment: total and excluding public services and agriculture
- Hours worked: total and excluding public services and agriculture
- **Gross Capital Formation:** total, machinery, transport and IP
- **Sentiment (confidence) indicators:** ESI (European Sentiment Indicator), industry, construction, services, retail, consumer
- **STS retail sector:** Retail sale (G47), non-specialized (G471), non-spec. with food beverages and tobacco predominating (G4711), other non-spec. (G4719), food, bev. and tobacco in specialized stores (G472) automotive fuel in spec. stores (G473), via mail and internet (G4791), food, IT and culture, textile, audio and visual, computers, medical, exc. food, exc. food and fuel.

More economic indicators

- GDP excluding public services and agriculture
- Employment: total and excluding public services and agriculture
- Hours worked: total and excluding public services and agriculture
- **Gross Capital Formation: total**, machinery, transport and IP
- **Sentiment (confidence) indicators**: ESI (European Sentiment Indicator), industry, construction, services, **retail**, consumer
- **STS retail sector**: Retail sale (G47), non-specialized (G471), non-spec. with food beverages and tobacco predominating (G4711), other non-spec. (G4719), food, bev. and tobacco in specialized stores (G472) automotive fuel in spec. stores (G473), **via mail and internet (G4791)**, food, IT and culture, **textile**, audio and visual, computers, medical, **exc. food**, exc. food and fuel.

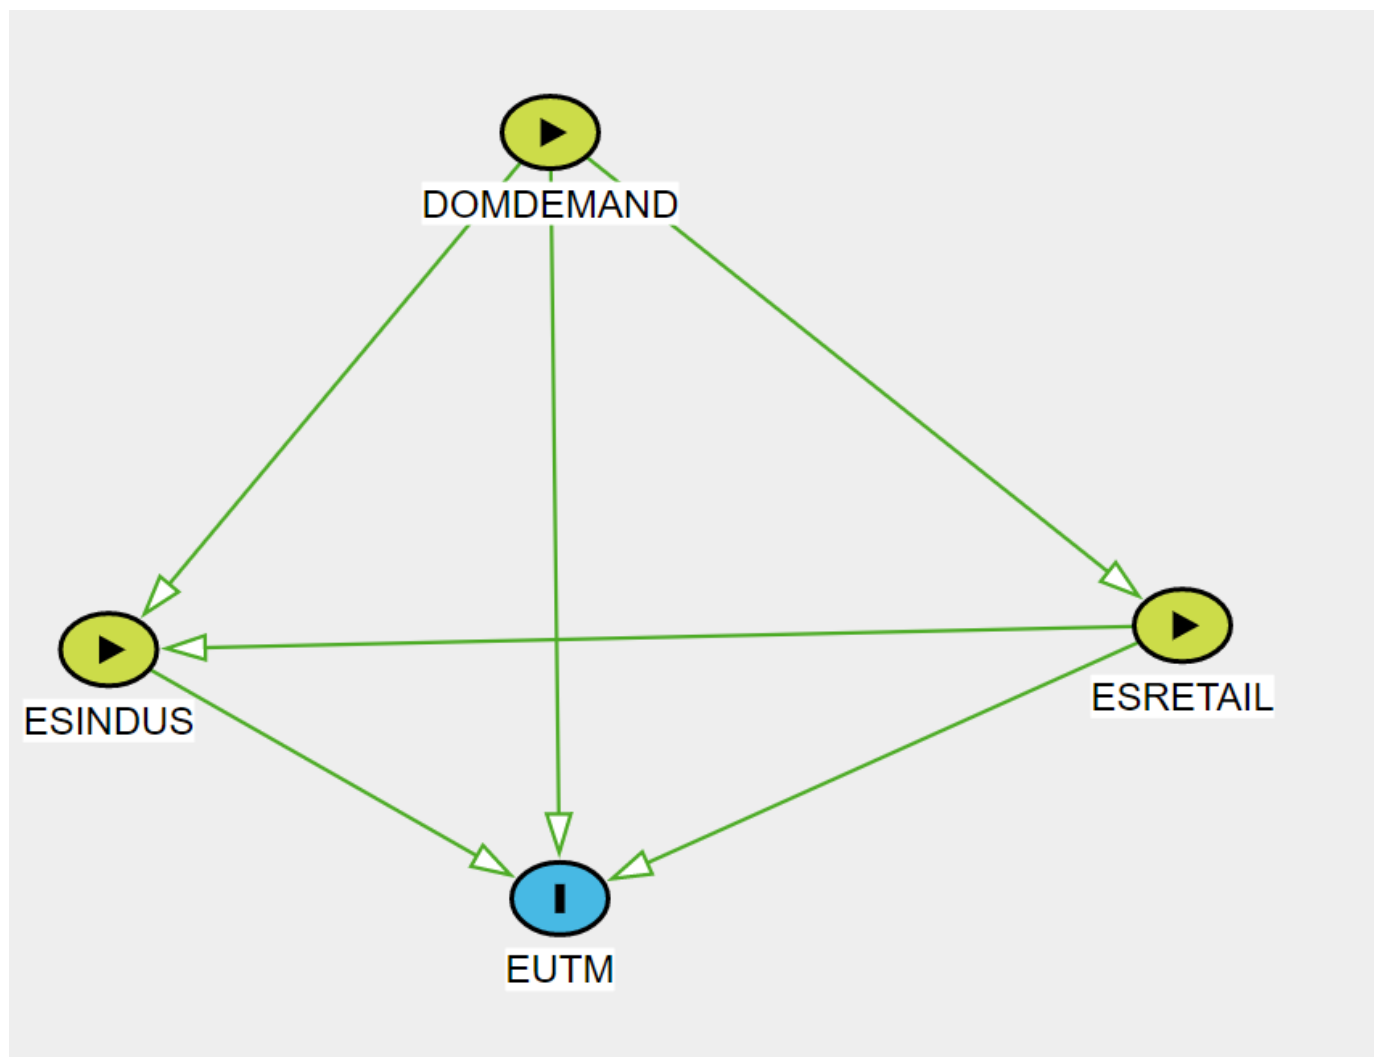

Main findings:

- Domestic Demand, Confidence indicator for retail sector and Gross Capital Formation have better cyclical correspondence with EUTM filings
- STS for retail trade sector: retail sales excluding food, beverages and tobacco and internet sales
- Better forecasts when EUTM registered from China are analyzed separately
- Quarterly univariate models have better than monthly univariate models based on fit of models and forecasts

MULTIVARIATE analysis: VAR models

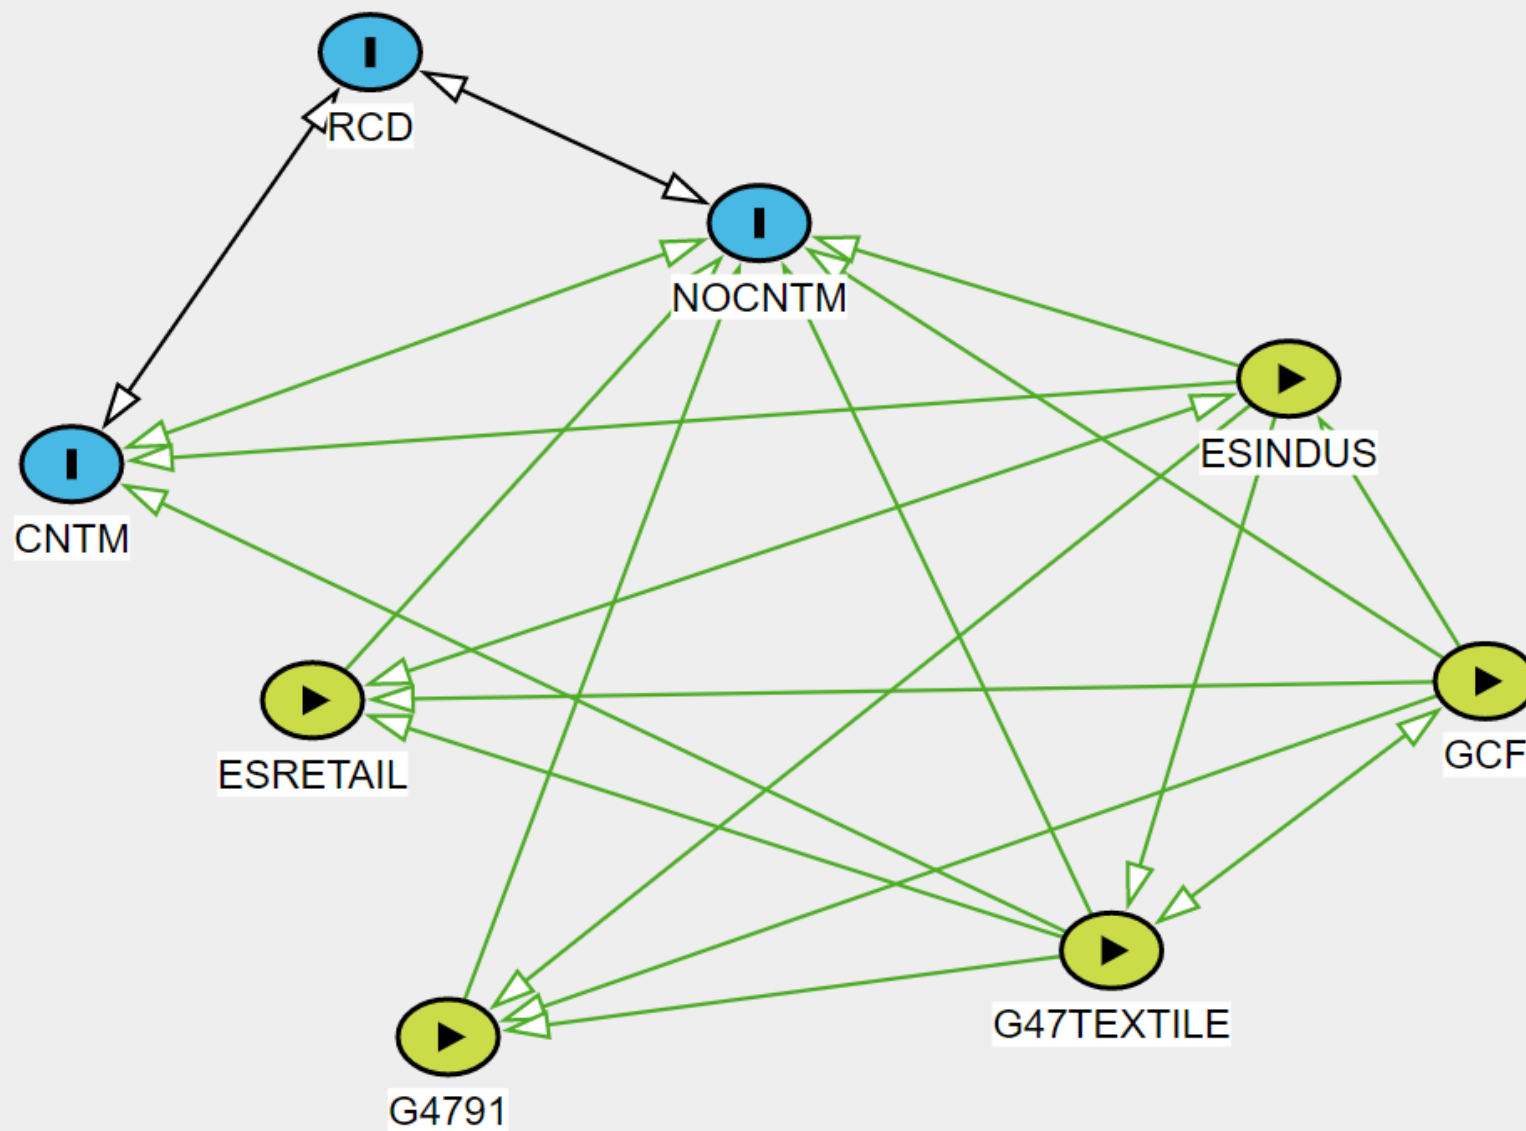

All variables (EUTM, GCF, confidence indicators, retail sales indicators, etc) are explained by their own past values and the current and past values of the other variables

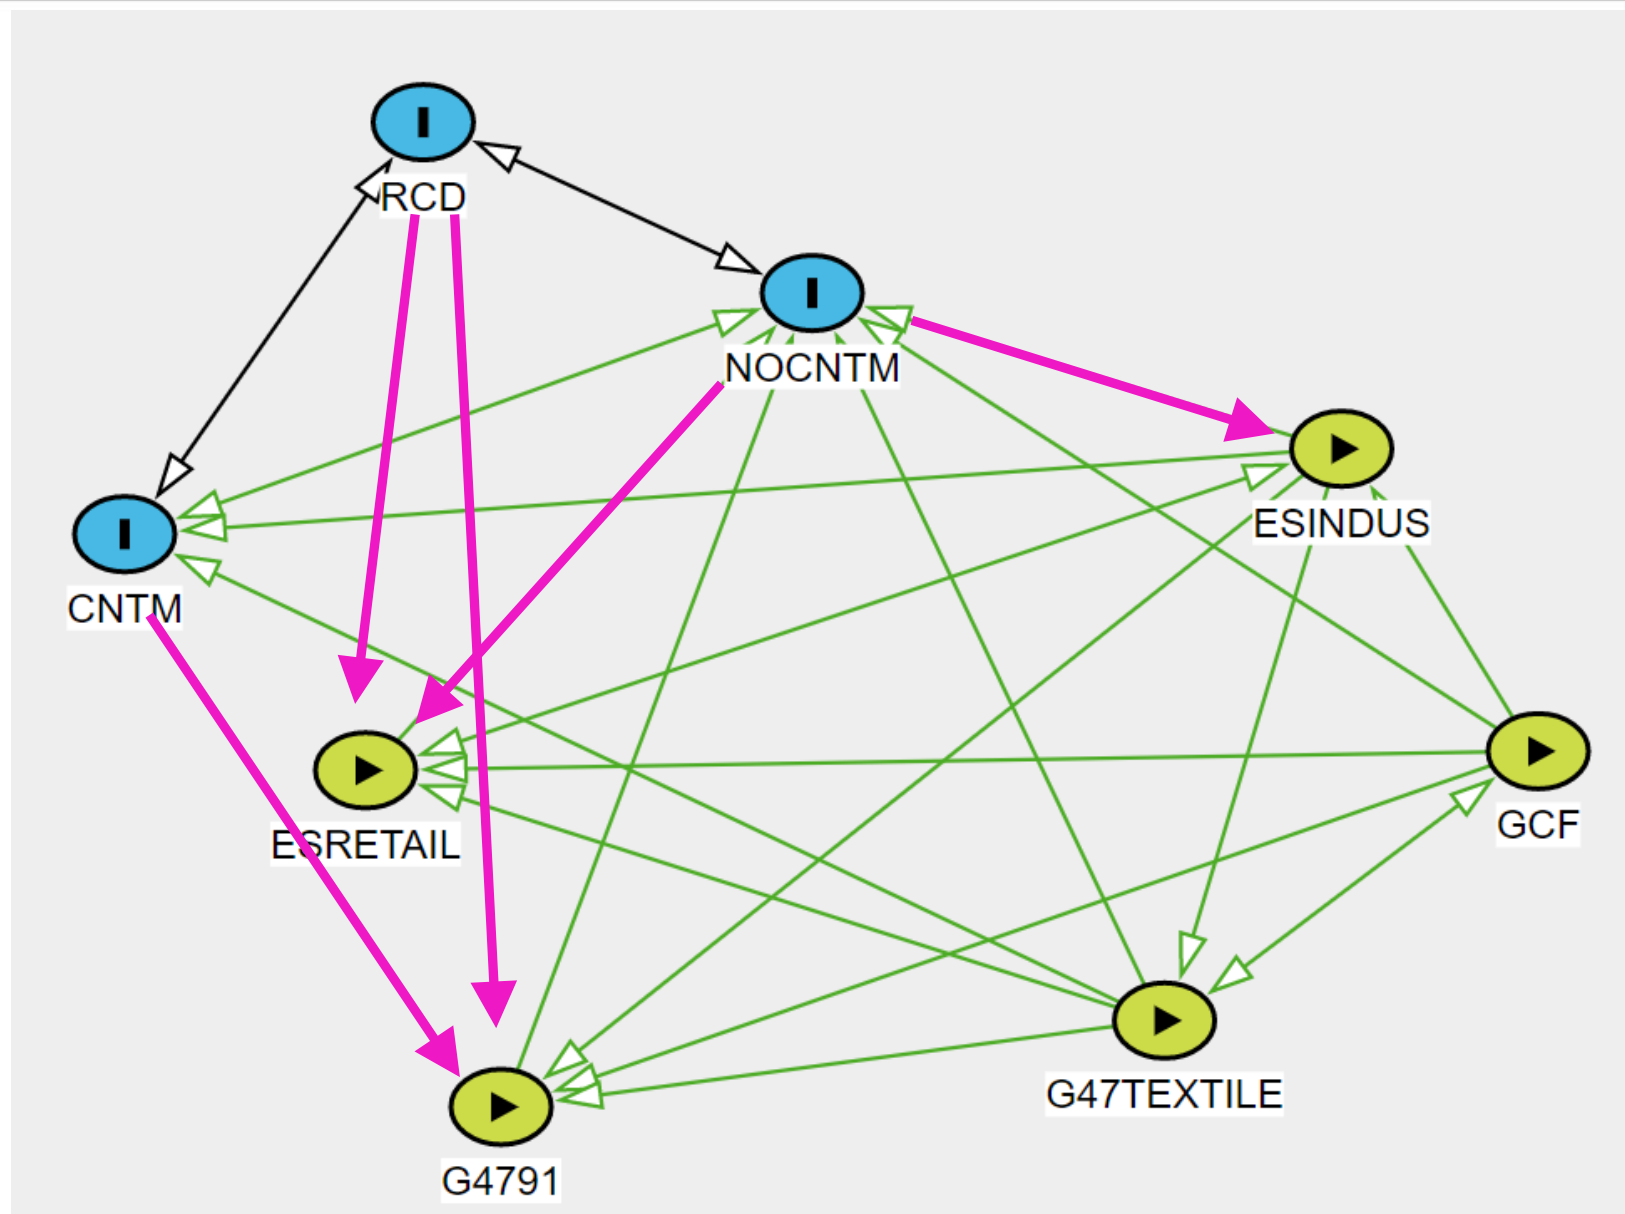

$$\begin{aligned}
 & \begin{pmatrix} Y_1 \\ Y_2 \\ Y_3 \\ Y_4 \end{pmatrix}_t \\
 &= \begin{pmatrix} \mu_1 \\ \mu_2 \\ \mu_3 \\ \mu_4 \end{pmatrix} + \begin{pmatrix} \alpha_{111} & \cdots & \alpha_{114} \\ \vdots & \ddots & \vdots \\ \alpha_{141} & \cdots & \alpha_{144} \end{pmatrix} * \begin{pmatrix} Y_1 \\ Y_2 \\ Y_3 \\ Y_4 \end{pmatrix}_{t-1} + \begin{pmatrix} \alpha_{211} & \cdots & \alpha_{214} \\ \vdots & \ddots & \vdots \\ \alpha_{241} & \cdots & \alpha_{244} \end{pmatrix} * \begin{pmatrix} Y_1 \\ Y_2 \\ Y_3 \\ Y_4 \end{pmatrix}_{t-2} + \dots \\
 &+ \begin{pmatrix} \alpha_{p11} & \cdots & \alpha_{p14} \\ \vdots & \ddots & \vdots \\ \alpha_{p41} & \cdots & \alpha_{p44} \end{pmatrix} * \begin{pmatrix} Y_1 \\ Y_2 \\ Y_3 \\ Y_4 \end{pmatrix}_{t-p} + \begin{pmatrix} u_1 \\ u_2 \\ u_3 \\ u_4 \end{pmatrix}_t
 \end{aligned}$$

Graphs by irfname, impulse variable, and response variable

Next ...

- More variables (leading indicators: investment, imports and confidence indicators for selected industries ...)
- Restrictions in VAR (BVAR)
- Include forecasts from EC and other international organizations
- Country data?

Thank you!

Textual Analysis of Trademark Activity During the COVID-19 Pandemic

Gray Barski & Alex Lehmann
Canadian Intellectual Property Office

What happened to trademarks during the COVID-19 pandemic?

- Trademark activity hit record highs during the COVID-19 pandemic
- Most recessions cause declines in trademark activity

Data & Methods

Data

- 352,727 trademark applications, 2010-2021
- Extracted goods and services statements
- Retained Nice class(es), country of origin

Methods

- Topics: Lines of Trade
 - Country/Nice-level effects
 - Number of topics
- Word Meanings
 - Change in context over time

Application Growth Drivers

- Notable Contributors
 - Chinese Filings
 - Canadian Filings
 - First-Time Filers
 - Filings Without Agents

Application Wording

- Information per application increases:
 - More G&S classes per each Nice class for applications referring to goods.
 - ‘Purposes’ and connectors become more prevalent.

Pre- and During-Pandemic Differences

- Is there a difference between the topics before and after the pandemic began?
- Use topic models and permutation tests to see if there's a difference

H_0 : The topic distributions before and after pandemic onset are the same.

vs.

H_a : The topic distributions before and after pandemic onset are different.

Nice Class	Obs. Similarity	p-value	Accepted
Class 5	0.838	< 0.0001	Confirmed
Class 9	0.916	< 0.0001	Confirmed
Class 10	0.955	< 0.0001	Confirmed
Class 25	0.928	< 0.0001	Confirmed

*Monte Carlo permutation tests with 10,000 permutations at 5% level of significance

Differing Impacts

Study Locality of Text – Does the context remain the same?

Model: Word2Vec

- **In-sample:** 2012 – 2016
- **Out-of-Sample:** 2017-2021

Spearman Correlation on Similarities:

- **Value of 1:** Words are being used in similar context.
- **Value of -1:** Words that differed the most in context now have the same meaning.

Regional Variation

- Does pandemic effect heterogeneity extend to regional variation?
- Find approximate time-dependent topic distributions for various regions

Regional Prevalence

Regional Topic Variation

Top 15 Trademark Application Topics

2018 | Nice Class 9 Applications from Canada

Top 15 Trademark Application Topics

2018 | Nice Class 9 Applications from China

Topic Growth Drivers

- **Class 5:** Disinfectant and pharmaceutical goods become more prevalent, dietary supplements decrease.
- **Class 9:** Consumer electronics.
- **Class 10:** Mask, sanitary, and protection.

Conclusions

- Pandemic-era trademark activity is characterized by a fundamental change in application text content.
- The behaviours of these changes vary based on factors such as Nice class and application country of origin.
- Further research into other factors affecting trademark application text content and the implications of these effects is warranted.

Thank you!

Educating Students on Intellectual Property in Applied Research Settings: The Impact in Using an Interactive Module

Annual IP Data & Research
Conference
March 24th 2022

Intellectual Property in Applied Research

The dream team

Dr. Nathalie Méthot

Director

Research & Innovation
College La Cité

Dr. Krista Holmes

Associate VP

Research & Innovation
George Brown College

Dr. Christina Deroche

Manager

Research & Innovation
Canadore College

Our goals

- Raise IP literacy in the context of applied research in colleges
- Responded to the virtual learning strategy of eCampus Ontario to create an online module
- Early in the project: a consultation with 50 respondents from Ontario colleges, 89% indicated that they had little knowledge of IP and 81% were interested in training on the subject

- Online module
- Will be available on the eCampus Open Library

- Link:

Intellectual property in college research :

THE PROJECT

It all began when...

Smart Paints wants to produce a new paint using natural pigments, instead of using chemicals.

*They have already developed a **prototype** of a paint, but they need help to improve the product.*

*To get more help, they started a collaboration with your college, through the **Applied Research Center** in Smart Painting.*

Questions???

Fig. 2

Context Matters

How FDI & IP Interact in Canadian Innovation
Information and Communications Technology Council (ICTC)

Mairead Matthews, Faun Rice, March 2022

m.matthews@ictc-ctic.ca

f.rice@ictc-ctic.ca

What is the relationship between inward FDI and IP in Canada?

- Development, ownership, commercialization, retention
- Bi-directional

Mixed methods

- 43 semi-structured interviews
- Thematic analysis/grounded theory approach
- Secondary data to test interviewee narratives

- Market Size, Critical Mass, Maturity
- Talent
- Private Investment, Exit Planning, Acquisitions
- Government Regulation, Financing, and Innovation Infrastructure

Case Studies

Medical Devices Talent Ecosystem ♦ Carbon Capture, Utilisation, and Storage PE/VC Availability ♦ Artificial Intelligence Patenting and Acquisitions

Legend

- Company is currently Canadian owned
- Company was Canadian owned, now acquired by MNE
- Company is currently a MNE
- Talent that stayed with the acquiring company following an acquisition
- Talent that founded a new company

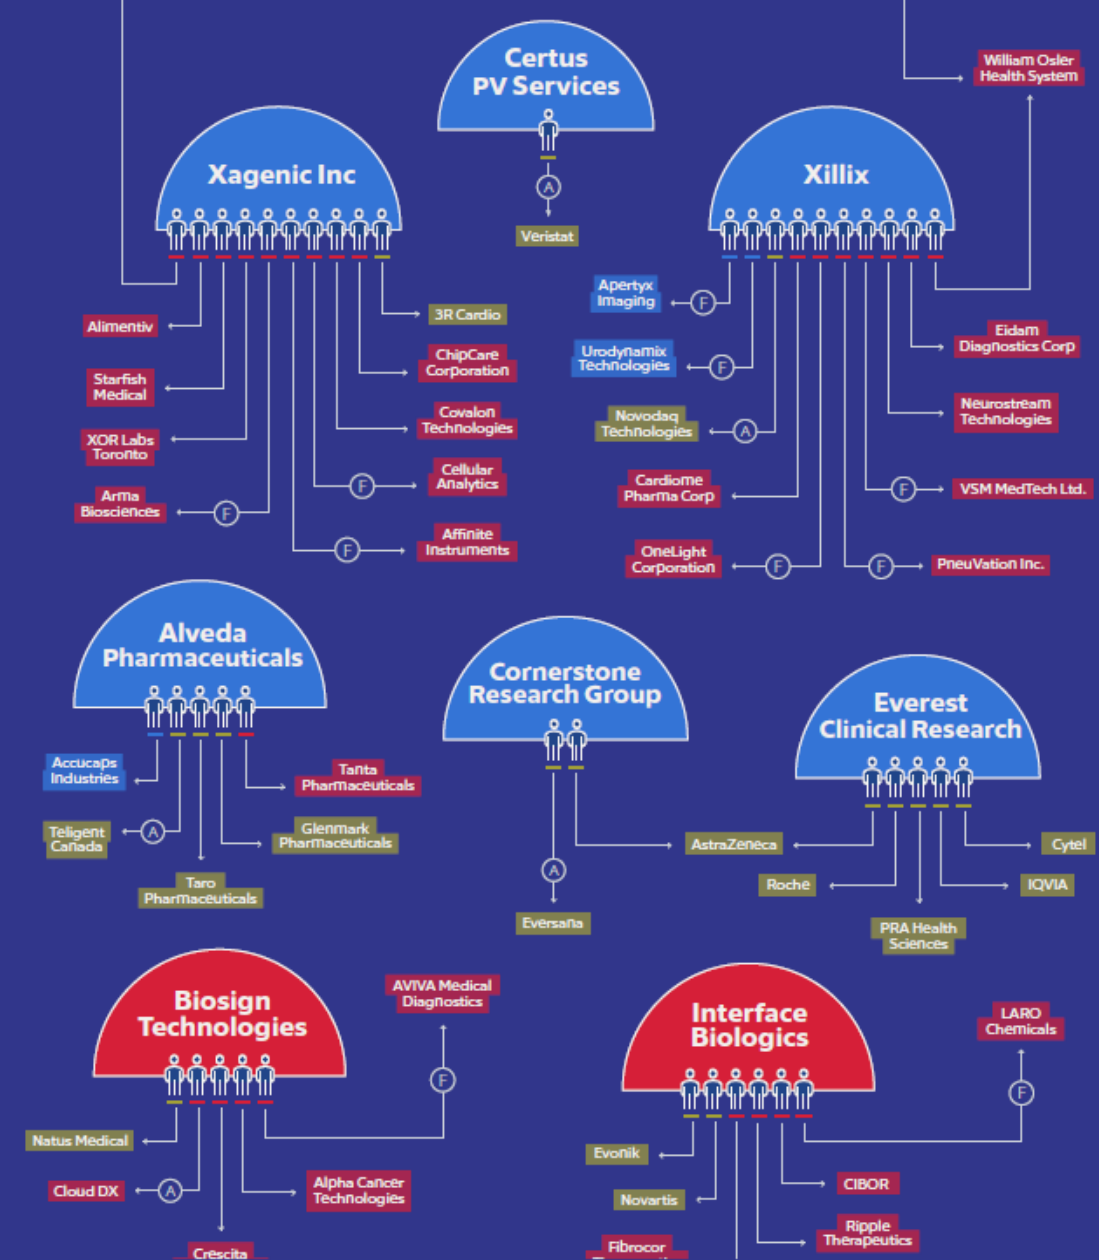

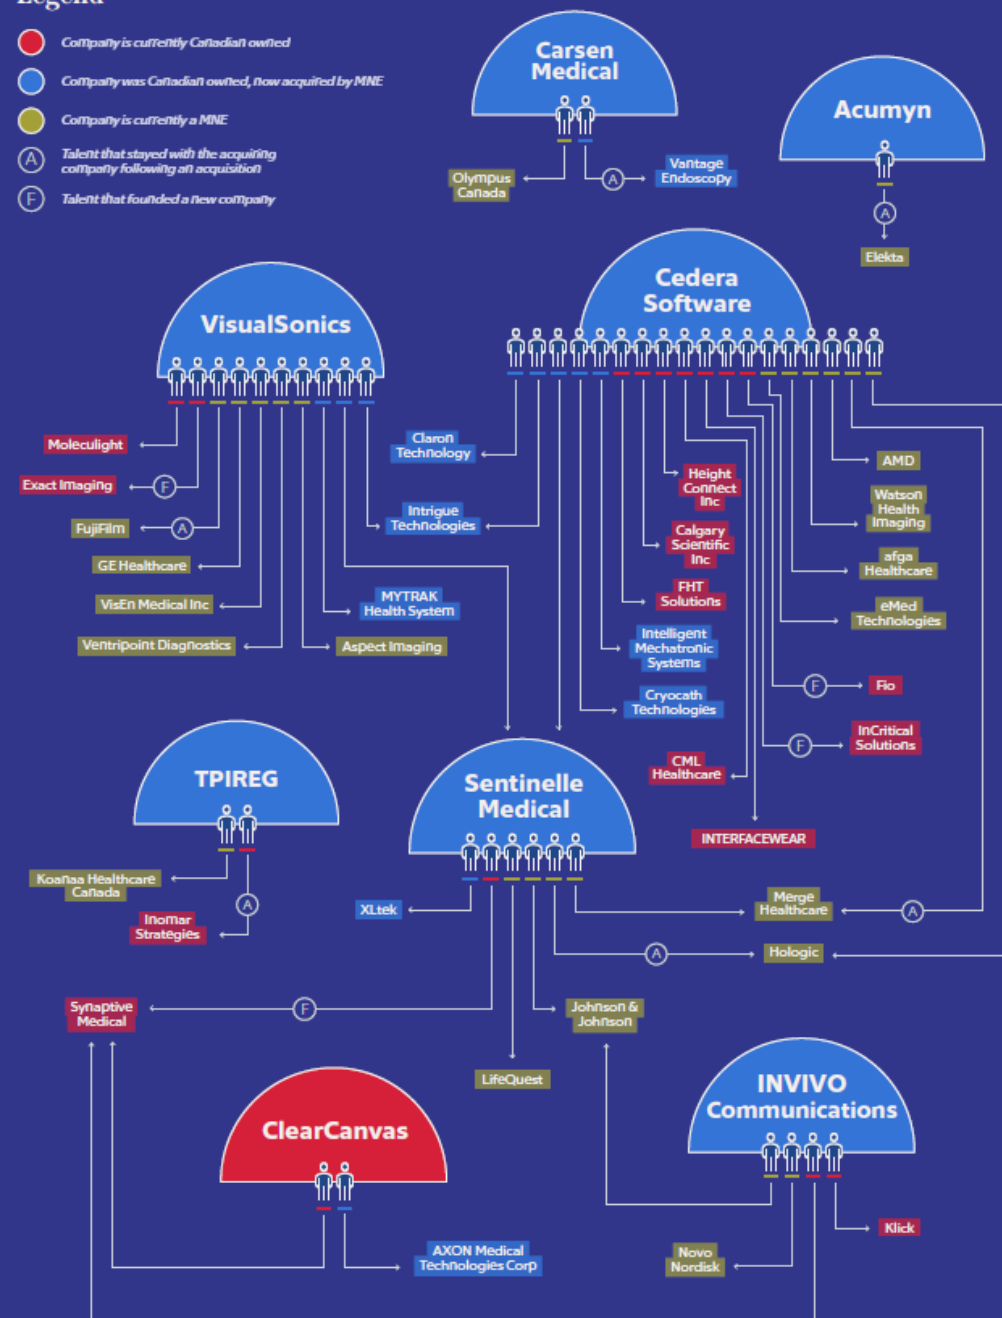

Figure 7: This network diagram shows where senior talent went when 16 Canadian medical device companies were acquired. The bolded companies are the acquired medical device companies. The blue arrows represent talent that switched companies, while the yellow arrows represent the talent that founded a new company. The colour of the boxes demonstrates the ownership status of the company: red means the company is currently Canadian owned; blue means the company was Canadian but has been acquired by an MNE; and green means the company is an MNE. Web scraping was used to track the movement of employees post acquisition (see Methodology section for more detail).

Opportunities to...

Strengthen the impact of FDI on Canadian innovation

- VC/PE ecosystem
- Tax planning
- Procurement
- Business density, incentives, & networks
- IP literacy & access
- R&D funds
- Industry associations
- Talent attraction

Conduct future research

- Improve granularity of FDI indicators
- FDI & Data
- GBA+ in FDI
- FDI & freedom to operate
- Include role of FDI in survey of Canadian business IP use
