About This Study

Online gender-based violence (OGBV) is recognized as one of the most widespread forms of interpersonal violence and, with rapid digitization, has become all too prevalent in today's online interactions.

OGBV takes many forms, including hacking, impersonation, surveillance/tracking, harassment/spamming, the non-consensual distribution of intimate photos and messages, and through recruiting victims into violent/harmful situations. The prevalence of OGBV is an **exacerbating factor in digital exclusion**. Yet currently there is **limited data** available on how various groups of people (women, men, LGBTQ+) experience the online world, the levels of harassment or violence they face and how the impacts of OGBV unfold on individuals as well as on the overall composition and freedom of the online world.

The Centre for International Governance Innovation (CIGI) and the International Development Research Centre (IDRC) have embarked on the project **Supporting a Safer Internet**. This project engaged an array of leading experts in the field to conduct research on this growing phenomenon with the aim to present a final report with proposed programmatic, policy and legal options for **mitigating OGBV for a safer online world**.

A key part of the overall project is a **research survey (led by Ipsos) that seeks to understand people's experiences online and the incidence of OGBV, with a specific focus on countries in the Global South**.

Methodology

TARGET AUDIENCE

General population representative survey covering respondents aged 18–74 in Canada and the United States and 16–74 in all other countries. Quotas and weighting by age, gender and region to ensure a representative sample.

SURVEY INSTRUMENT

The survey instrument was designed in consultation with the steering committee (subject matter experts from and/or partnering with CIGI/IDRC). Ipsos global and regional experts also contributed from the point of view of both regional nuances and operational feasibility.

Pilot interviews were conducted in each country and based on the feedback, further adjustments were made to the content and flow, as well as administration (instructions/descriptions, etc.).

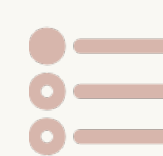

SURVEY METHODOLOGY

An online survey was supplemented by offline interviews in selected countries.

(In countries where internet penetration is limited or based on limitations of online panel coverage, offline interviews [face-to-face or telephone] were also conducted to ensure inclusion of respondents that may have been under-represented or excluded online.)

The survey was developed in English and conducted in-language in each country.

FIELDWORK DATES AND LENGTH OF INTERVIEW

Fieldwork dates: June 25 to September 2, 2021

Length of interview: Online survey: ~15 minutes and offline survey: ~30–35 minutes

Reporting Conventions and Considerations

1 The term “LGBTQ+” has been used throughout the report where “+” stands for each country’s unique traditions, norms and definitions.

The survey asked three separate questions on gender identity and sexual orientation. For simplification and in order to study the data on a quantifiable sample, “LGBTQ+” is defined as those who selected “A gender other than the one I was assigned at birth (‘transgender’)” or “Another gender identity” for questions on gender identity or “Gay/Lesbian/Another sexual orientation” for question on sexual orientation.

2 Due to **lower base size for the LGBTQ+ group**, differences may not test as statistically significant. Based on the objectives of the research and, therefore, the importance of analyzing the results separately for LGBTQ+ respondents, data is presented for directional purposes only and should be interpreted with caution.

3 Some **questions were not asked in certain countries**.
A full list of country-specific adaptations can be made available upon request.

4 Where **results do not add to 100%**, it is due to rounding or because the question allowed the selection of multiple responses.

REPORTING CONVENTIONS AND CONSIDERATIONS

Ipsos follows a “no-harm” approach in surveying. Given the sensitive nature of the topic and in recognition of the fact that some of the questions, especially on personal experiences, could be triggering, all respondents were:

- informed about the topic and the objectives of the survey and asked for their explicit consent to participate before the start of the survey;
- informed up front that all questions are voluntary and an option of “Prefer not to answer” was available in each question, and could be selected if the topic was uncomfortable or if the respondent did not want to answer for any other reasons; and
- provided a list of local resources and helplines if they wished to seek support.

As mentioned above, the survey questions included options of “Don’t know” or “Prefer not to answer” as valid response options that respondents could select if they did not wish to answer a particular question or did not feel they had enough information to share an opinion on the topic.

- The data and analysis presented in the report **do not exclude** these cases and include a proportion of respondents who selected these options of “Don’t know” or “Prefer not to answer.” This proportion varies for each question and for each country and may be representative of a “response style” unique to each country and culture.
- Please note that if the proportion of those who selected “Don’t know” or “Prefer not to answer” is excluded from the data, the analysis and interpretation may change and will differ from what is presented in this report.

Brazil Findings

“Online gender-based violence has been minimized and ignored because of the mistaken belief that online abuse is not as harmful as abuse that happens in the physical world. To combat this misconception, it is vital to understand the many forms that online gender-based violence takes, who the victims are and what harms arise as a result of it.”

Suzie Dunn, CIGI Senior Fellow

Total surveyed: **1,001**

Total LGBTQ+ respondents: **136**

- Four out of 5 (80%) of Brazilian respondents who identify as LGBTQ+ have experienced online harm(s).
- Of those impacted, 49% believe they were targeted because of their sexual orientation.

- 77% of respondents who identify as LGBTQ+ and 69% of women respondents feel that their mental health was negatively or very negatively impacted by the incident(s) of online harm.
- 28% of those surveyed took a break from social media following an incident of online harm.

- 42% of respondents who experienced some form of online harm did not reach out to anyone following the incident(s).
- 26% of those surveyed believe that the police have the most responsibility to help end OGBV.

Internet Access

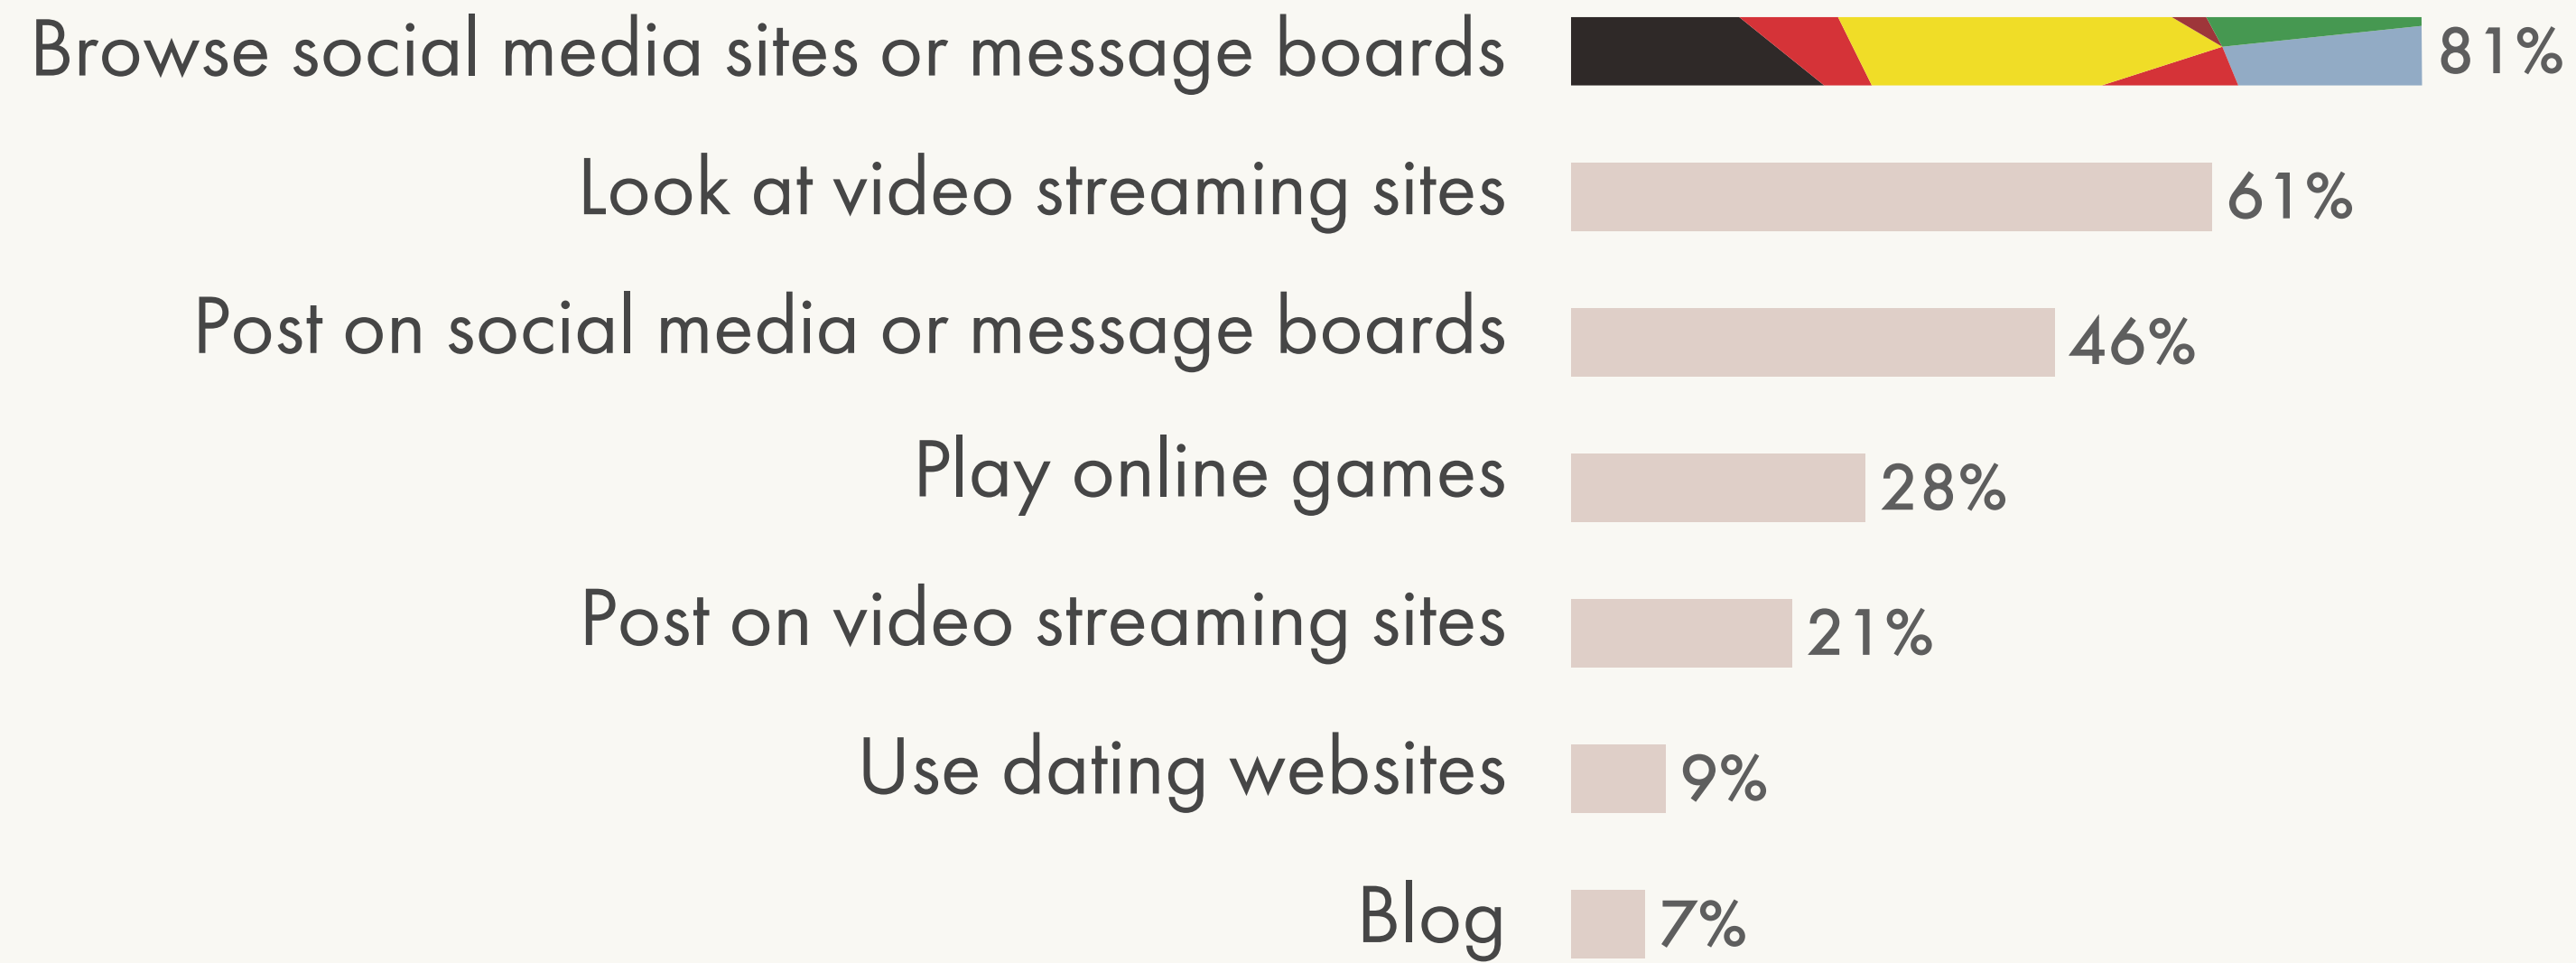

97%

of Brazilian respondents have personal access to the internet.

Q1. How do you access the internet?

Note: "Personal access" refers to access through a personal smartphone, tablet and/or a personal computer.

Frequency of Daily Use

91%
send messages daily.

Q2. Please indicate how often you do the following.

Type of Internet User

90%

describe themselves as an "average/typical" internet user.

Q3. What kind of an internet user are you? Select all that apply.

Social Media Following

BRAZIL

39%

say they have a significant social media following.

Q4. Would you say you have a significant public following on your social media accounts?

Most Effective Resources Available to Help Respond to OGBV

Q5. Please rate the effectiveness of resources available in your community to help respond to online gender-based violence on a scale of 1–5 with 1 being very ineffective resources and 5 being very effective resources.

Note: The percentages reported are for T2B scores, i.e., those who rated 4 or 5 on the scale of 1–5 (T2B = top two box).

The Most Important Resources for Addressing OGBV

Q6. On a scale of 1–5 with 1 being not important at all and 5 being very important, how important do you think the following mediums/resources are in addressing online gender-based violence?

Note: The percentages reported are for T2B scores, i.e., those who rated 4 or 5 on the scale of 1–5.

Organizations That Have the Most Responsibility to Help End OGBV

Q7. Please rank this list from 1 to 7, placing the organization you think has the most responsibility to help end online gender-based violence at the top (rank 1) and the organization that you think has the least responsibility at the bottom (rank 7).

Note: The percentages reported are for rank 1 scores, i.e., organizations with the most responsibility.

A large, light brown graphic of the number 67% is positioned on the left side of the slide. The numbers are bold and sans-serif, with the percentage sign being a simple outline.

strongly or somewhat agree that they have the knowledge or skills needed to help someone who has experienced an incident of OGBV.

Q8. If someone you know were to experience an incident of online gender-based violence, to what extent do you agree that you have the skills or knowledge needed to help the person with their problem?

How Big a Problem Is OGBV in Your Country?

Q9. How big an issue do you think online gender-based violence is for yourself, men and women in your country? (Based on a 5-point scale where 1 means “not a problem at all” and 5 means “very big problem.”)

Note: The percentages reported are for T2B scores, i.e., those who rated 4 or 5 on the scale of 1–5.

Behaviour Harmfulness Level

BRAZIL

	LGBTQ+	Women	Men	Overall
Identity and reputation-based harms	65%	76%	69%	72%
Privacy and security-based harms	72%	74%	71%	73%
Coercion and harassment	70%	76%	67%	72%
Sexual harms	68%	76%	70%	73%

Q10. If the following were to happen to you or someone you know, how harmful would you consider these online behaviours?
Please rate on a scale of 1–5 where 1 is not very harmful and 5 is extremely harmful.

Note: The percentages reported are for “extremely harmful (rated 5/TB)” (TB = top box).

Identity and Reputation-Based Harms

BRAZIL

BEHAVIOUR HARMFULNESS LEVEL

Q10. If the following were to happen to you or someone you know, how harmful would you consider these online behaviours? Please rate on a scale of 1–5 where 1 is not very harmful and 5 is extremely harmful.

Note: The percentages reported are for “extremely harmful (rated 5/TB).”

Privacy and Security-Based Harms

BRAZIL

BEHAVIOUR HARMFULNESS LEVEL

Q10. If the following were to happen to you or someone you know, how harmful would you consider these online behaviours? Please rate on a scale of 1–5 where 1 is not very harmful and 5 is extremely harmful.

Note: The percentages reported are for “extremely harmful (rated 5/TB).”

Coercion and Harassment

BRAZIL

BEHAVIOUR HARMFULNESS LEVEL

Q10. If the following were to happen to you or someone you know, how harmful would you consider these online behaviours? Please rate on a scale of 1–5 where 1 is not very harmful and 5 is extremely harmful.

Note: The percentages reported are for “extremely harmful (rated 5/TB).”

Sexual Harms

BRAZIL

BEHAVIOUR HARMFULNESS LEVEL

Q10. If the following were to happen to you or someone you know, how harmful would you consider these online behaviours? Please rate on a scale of 1–5 where 1 is not very harmful and 5 is extremely harmful.

Note: The percentages reported are for “extremely harmful (rated 5/TB).”

Personal Experience of Harm

Frequency of Harm

Once/a few times:

Q15. When the incident(s) occurred, how often did you experience it?

Reason for Being Targeted

Q16. Thinking of the online incident that had the most impact on your life, do you think you were targeted because of any of the following aspects about yourself? Select all that apply.

Types of People Conducting Harm

CLOSE (Partner/friends/family) (NET) **38%**

- Friend 16%
- Ex-intimate partner 15%
- Family member 9%
- Current intimate partner 4%

KNOWN (Co-worker/teacher, etc.) (NET) **22%**

- Co-worker 11%
- Another student 8%
- Client/customer 4%
- Teacher/coach 3%

 **OTHERS** (Not known) (NET) **57%**

- Someone I've never met/anonymous 43%
- Could not be determined 9%
- A random group of people 8%
- Member of an identifiable online group 6%
- Politicians or public authorities 2%
- Other 4%

PREFER NOT TO ANSWER **8%**

Q17. Thinking of the online incident that had the most impact on your life, who was the person who targeted you?
Select all that apply.

Gender of the Party Inflicting Harm

Q18. What was the gender of this person who targeted you?

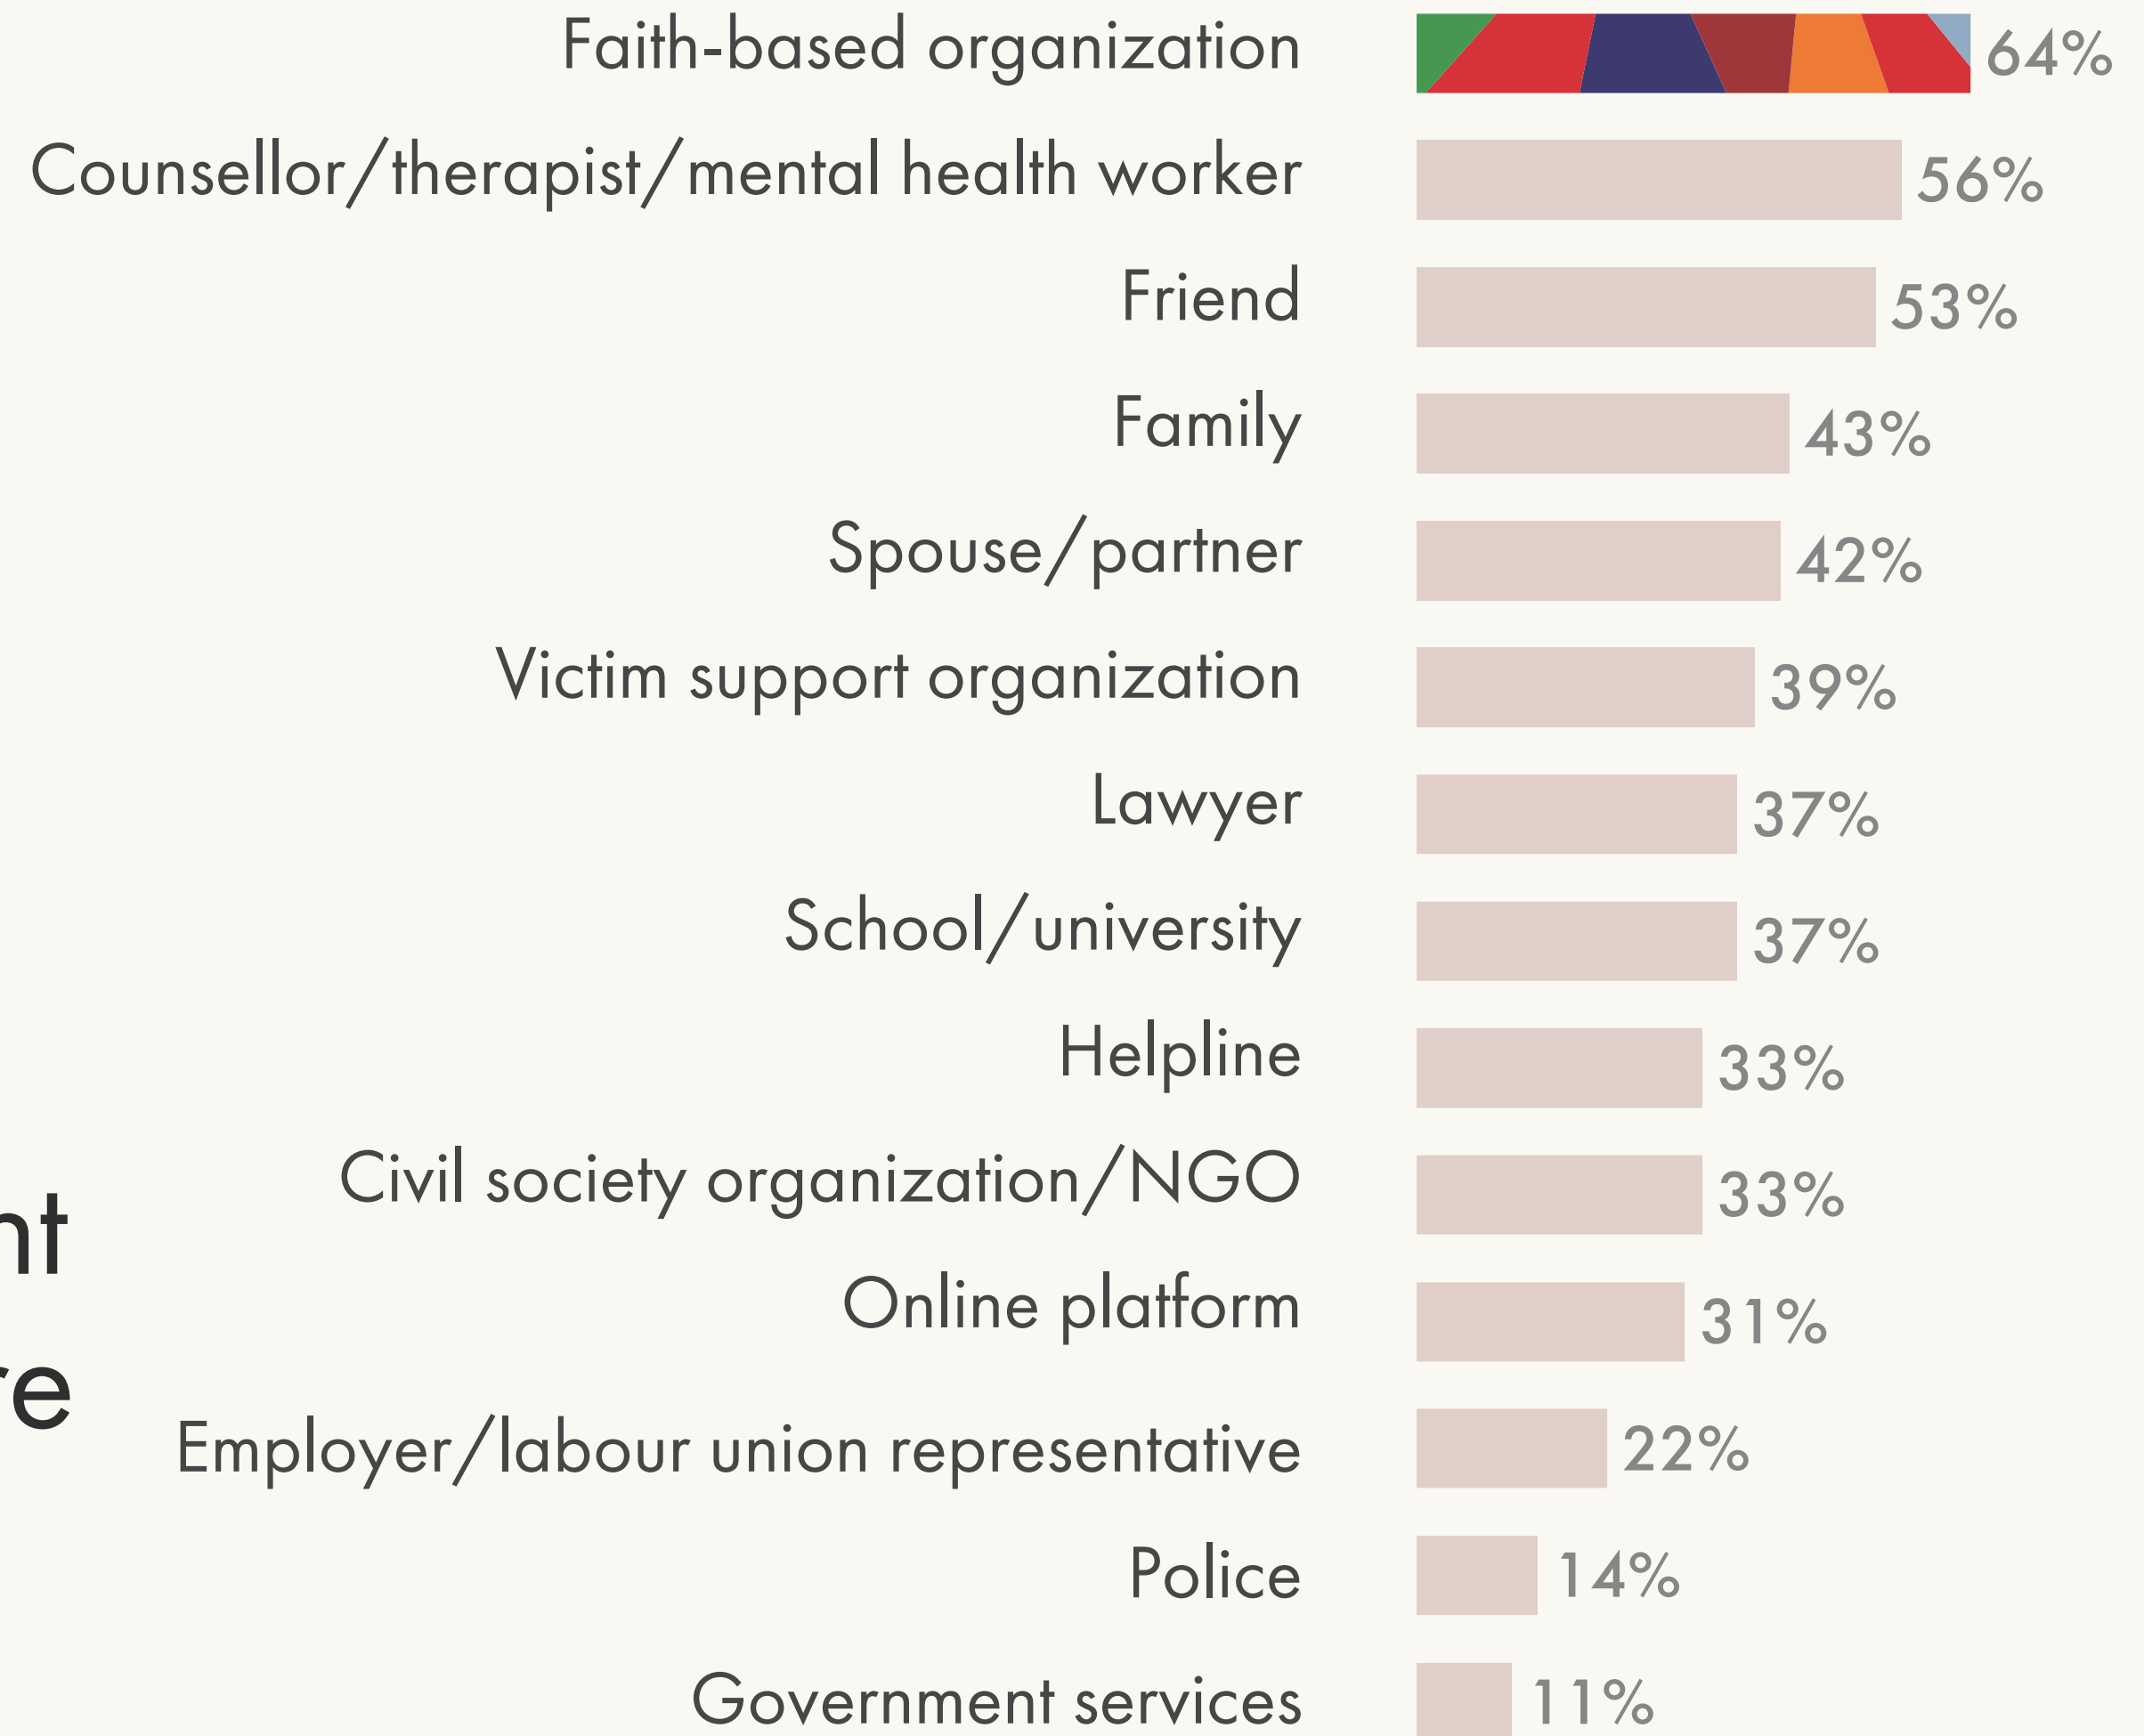

42% of those who experienced some form of online harm did not reach out to anyone after the incident.

Q19. Did you reach out to any of these people or organizations after the incident? Select all that apply.

Effective Resources

65%

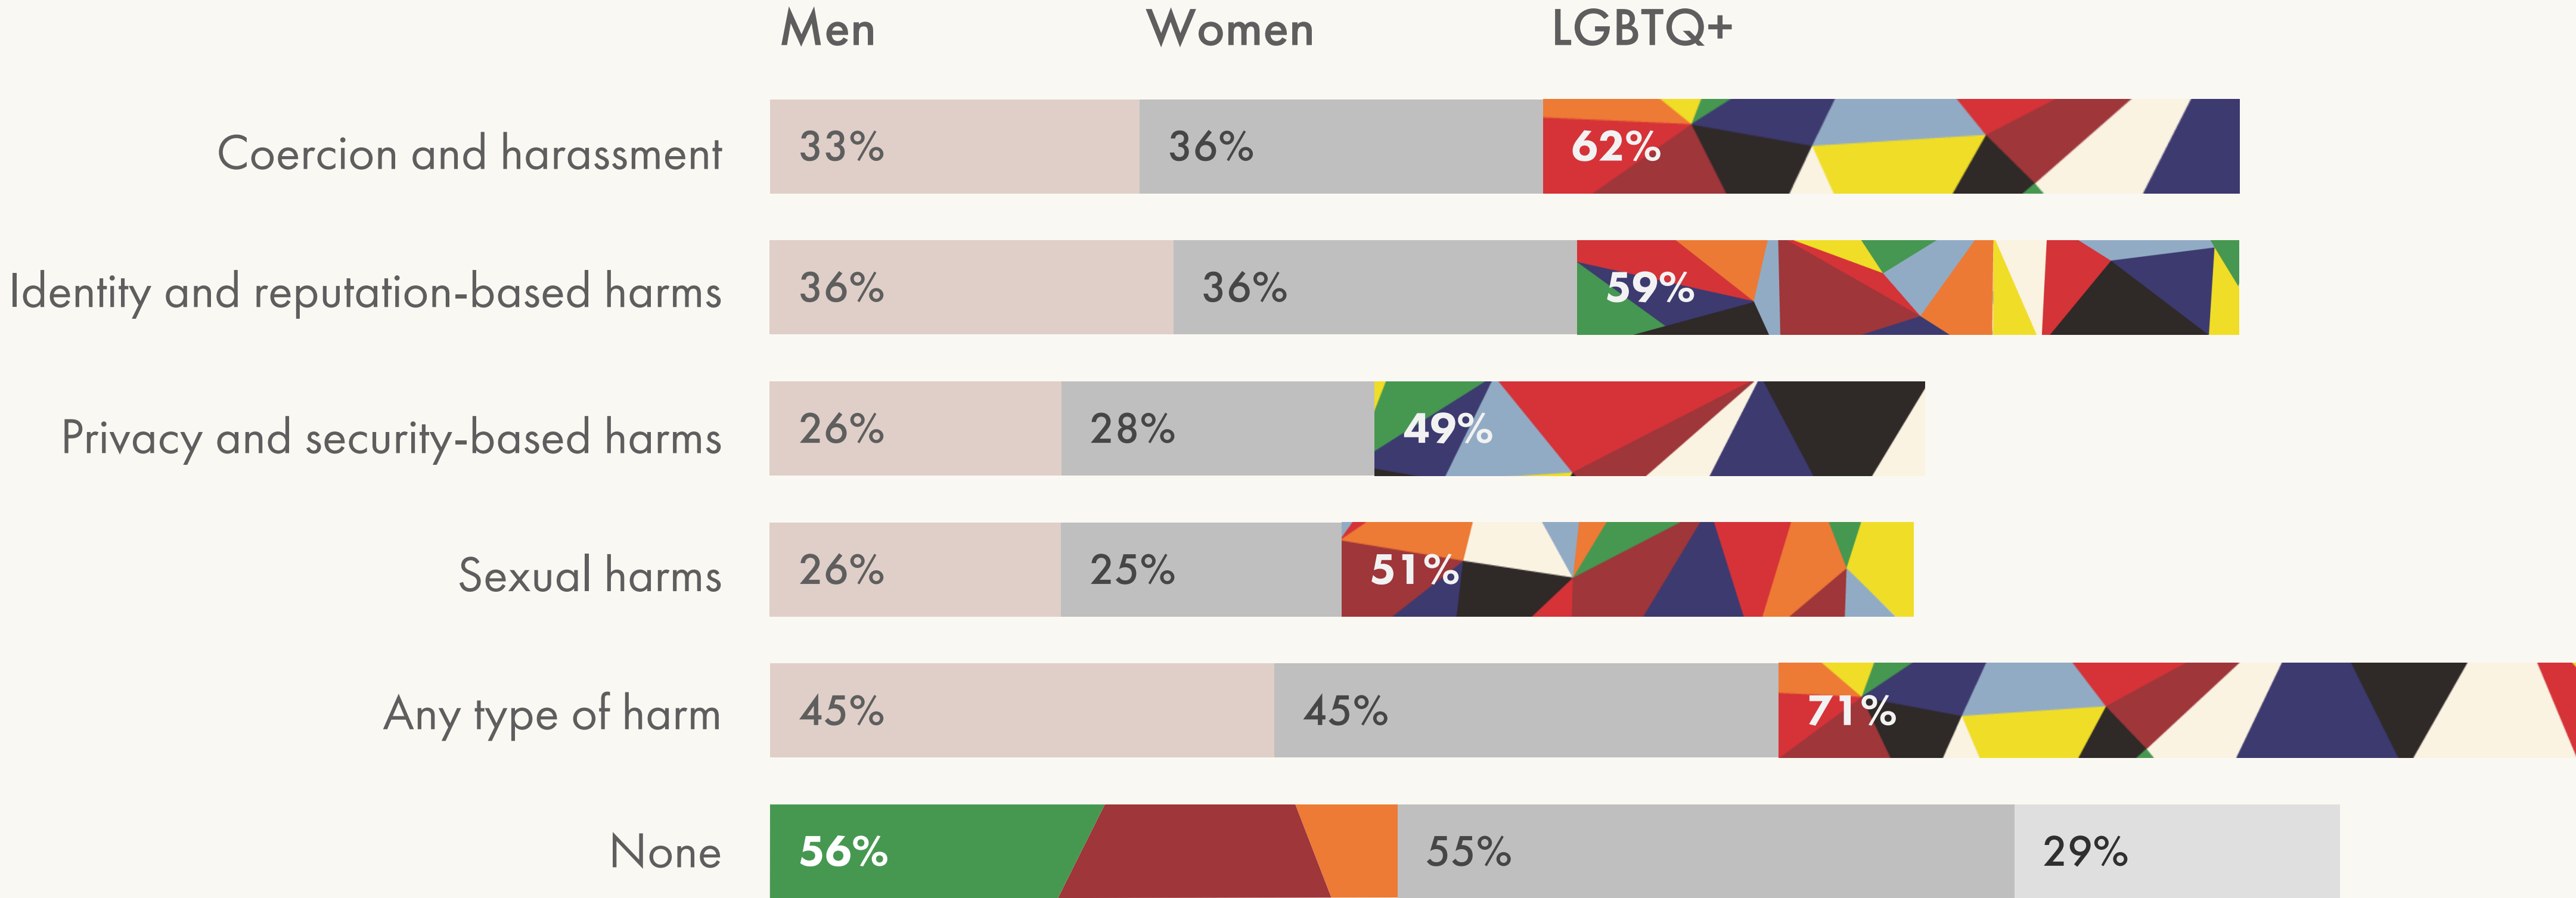

of those who contacted someone following an incident identified a doctor/health-care worker as the most effective resource.

Q20. How effective were the people or organizations you contacted in helping you with the incident?

Note: The percentages reported are for "very effective (rated TB)."

Witnessing Online Harms

Q21. Has anyone close to you ever experienced any of the following?

Witnessing Online Harms

	Men	Women	LGBTQ+	
Called discriminatory names or derogatory cultural terms	21%	21%	40%	Identity and reputation-based harms
Lies posted online about them	22%	22%	40%	
Online impersonation	16%	20%	32%	
Harassed because of gender, race, sexual orientation, disability, etc.	21%	26%	47%	
Someone accessing device or social media accounts without permission	17%	22%	31%	Privacy and security-based harms
Monitored, tracked or spied on online	13%	12%	22%	
Having personal contact information posted online without permission	13%	15%	28%	
Physically threatened online	17%	15%	31%	Coercion and harassment
Blackmailed online	13%	15%	26%	
Networked harassment	18%	18%	41%	
Repeatedly contacted by someone they don't want to be contacted by	26%	29%	51%	
Personal nude or sexual images of them shared with someone or posted online	18%	15%	30%	Sexual harms
Unwanted sexual images sent to them	22%	22%	46%	

Q21. Has anyone close to you ever experienced any of the following?

Victim's Gender

Q22. What is the person's gender?

Platforms Used in Incidents

43%

of incidents occurred on communication-based social media platforms.

 Messaging apps	41%
Image-sharing social media	27%
Text message	18%
Video-sharing social media	15%
Email	12%
Professional websites	5%
Video-conferencing apps	5%
